

## Stellar – Audio Description Authoring, Editing

### Recording and Mixing - In a Browser

Audio Description (AD) authoring and editing is a complex task. Stellar offers a set of tools to simplify the process and improve productivity.

Stellar provides gap detection, author, edit, review, record and re-timing for all AD workflows. Supports all industry standard file formats.

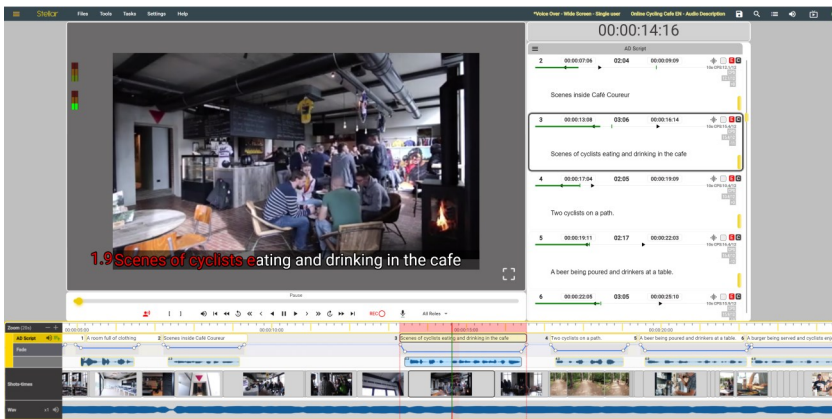

Stellar works directly with industry standard ESF files so you can Create, Edit, Save ESF files for both text only and text + audio formats.

AD Text creation, audio recording and editing, graphical Pan and Fade controls, native ESF and Netflix TTAL file support.

Audio outputs in mono, stereo, premix, DTT, MP4 video and Broadcast premix output formats as well as Protocols Project output.

By using a wide range of web services Stellar enables complex tasks to be performed quickly and efficiently. Use a range of over 800 synthetic voices or use speech to text technology to automatically detect gaps in dialog.

Stellar provides the speed and user experience of a dedicated PC App with the flexibility and easy deployment of a Web App
