Audio recording for VO, ADR and lip-sync Dubbing is a complex task. Stellar provides tools to simplify the process and improve productivity.

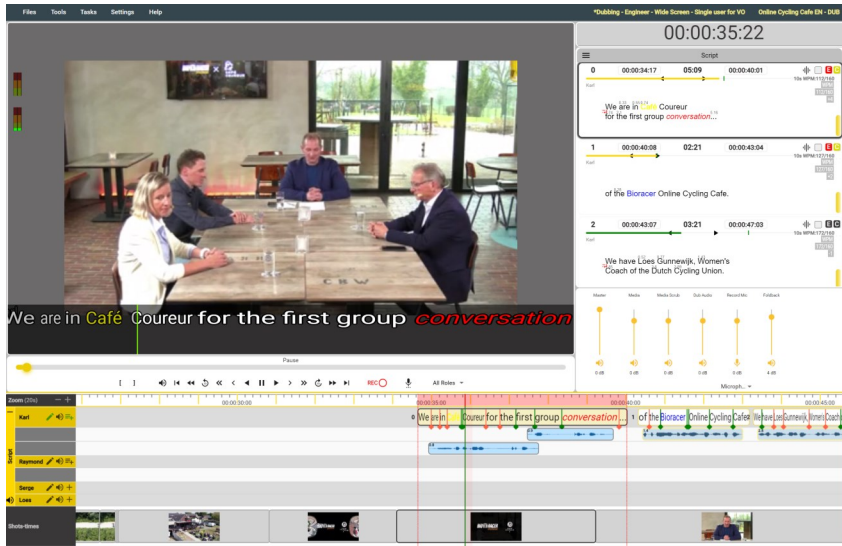

Stellar provides script import, editing, translation, adaptation, recording, QC and mixing in a single solution.

Single user or multi-user, in studio or remotely. Collaboration tools support remote home working or hybrid arrangements. Built in intercom, synchronisation and remote recording features allow a full Virtual Studio experience with 5 users or more in separate locations.

Supports all industry standard file formats including Netflix TTAL. Export complete Protocols (ptx) project files.

By using a wide range of web services Stellar enables complex tasks to be performed quickly and efficiently. Speech to text, text alignment, machine translation and synthetic voices.

Stellar provides the speed and user experience of a dedicated PC App with the flexibility and easy deployment of a Web App

Use Stellar to:

- Import, edit, translate and adapt script - In multiple file formats
- Assign multiple roles
- Record, trim and position Takes with Rythmoband
- Collaborate remotely with talent, engineers, directors ...
- Review in real time with prog audio—supports multi track
- Mix output in many formats or export a Protocols project

Key Features:

- Cloud storage support - work on media in any location
- One to a hundred users - scale up or down instantly
- Runs in Chrome - any user, anywhere, any time
- Any OS - Windows (7,10 & 11), Mac and Linux

Toolset

- Full Video controls
- Video Overlay display
- Audio scrubbing
- Timecode display
- Multi-column Text Editor
- Timed text Timeline Bar
- Shot Change Bar
- Configurable Rythmoband
- Easy to use Adaptation
