

## Stellar – Multi-language Subtitle QC and Conforming In a Browser

There are many reasons you may need to conform a set of multi-language subtitle files; the subtitles have been produced for one version and since then other edits have been made. Sometimes a compliance cut has been made, sometimes it's just a bumper added or maybe advert breaks have been added or removed. In all cases the subtitle files need to be checked and conformed to the correct media file.

This can be a very time consuming process and often needs specific language skills for each subtitle file.

Stellar provides a set of tools to significantly speed up the QC and conforming process. By working in conjunction with Nebula's powerful distributed processing capabilities Stellar provides the best combination of performance, flexibility, security and ease of use.

Stellar provides the speed and user experience of a dedicated PC App with the flexibility and easy deployment of a Web App

### Use Stellar to:

- Review a large number of languages concurrently 25+
- Adjust start time offsets
- Find and correct alignment errors
